

IMAGING DATA ACCESSING METHOD

ABSTRACT OF THE DISCLOSURE

A method for accessing image data is used in a computer system. The computer system includes a core logic unit, a system memory, a graphics accelerator, and an image data outputting device in communication with a south bridge chip of the core logic unit. The method comprises the following steps. Firstly, image data are received from the image data outputting device by the core logic unit. Then, the image data are written into an AGP memory block of the system memory. Afterwards, the image data are accessed in the AGP memory block by the graphics accelerator.
